

1. Introduction to Infinite Scroll

Pagination in the catalog and search results is not something that all customers like. If your catalog contains a lot of products, navigation can become a nightmare. Infinite Scroll extension uses Ajax functionality and makes it easier to deal with a big number of products and lets customers scroll down until the last product in the catalog or search results page.

In addition to auto- and manual scrolling, this extension offers customers a “scroll-to-top” button that facilitates the process of getting back to top of the catalog page or search results page.

Key features:

- No pagination in the catalog;
- Ajax functionality accelerates the load;
- Automated or manual scrolling to the last product of a catalog or search results page;
- Scroll-to-top button.

2. How to Configure

In order to configure this extension, navigate to *Stores => Configuration*. Then select “*Infinite Scroll*” under “*BelVG Extensions*”.

The screenshot shows the Magento Configuration interface. On the left is a sidebar with navigation options: DASHBOARD, SALES, PRODUCTS, CUSTOMERS, MARKETING, CONTENT, REPORTS, STORES, and SYSTEM. The main area is titled 'Configuration' and shows the 'Infinite Scroll' extension under the 'BELVG EXTENSIONS' category. The settings for this extension are as follows:

Setting	Value	Scope
Enabled For Frontend	Yes	[STORE VIEW]
Scroll Type	Manual	[STORE VIEW]
More Button Text	More	[STORE VIEW]
Back Button	Yes	[STORE VIEW]

At the top right of the configuration area, there is a 'Save Config' button. A notice at the top of the settings area states: 'This module was developed by www.BelVG.com. For docs & examples refer to the BelVG web site. We have the largest selections of extensions and themes on Magento.'

- **Enabled For Frontend** - this option enables or disables the extension for the Frontend.
- **Scroll Type** - If you select “Autoscroll”, then the products at the bottom will be loaded automatically. If you select “Manual”, then in order to load more products, a customer will need to push a “More” button - you can change the name of the button in the next row.
- **More Button Text** - You can change the name of the button and write something like “Show me more”.
- **Back Button** - It’s a scroll-to-top button. If you select “Yes”, then it will appear on the right.

When your configuration is ready, don’t forget to press the “**Save**” button.

3. How to Use

After you enable this extension, **Catalog pages and Search results pages** will not be paginated. Ajax functionality will accelerate page load.

If you select **Autoscroll**, your customers will be able to scroll down till the last product and won't have to push any buttons. If you select **Manual** scroll, then your customers will be able to scroll down till the **"More" button** (you can change the name of the button). After a customer pushes this button, another portion of products will be displayed.

Back button will help customers to get back to the top of Catalog page or Search results page.

The screenshot displays a product catalog page with four items:

- Jade Yoga Jacket**: \$32.00, 3 reviews, color options: blue, grey, green, sizes: XS, S, M, L, XL.
- Adrienne Trek Jacket**: \$57.00, 2 reviews, color options: grey, orange, purple, sizes: XS, S, M, L, XL.
- Inez Full Zip Jacket**: \$59.00, 3 reviews, color options: orange, purple, red, sizes: XS, S, M, L, XL.
- Riona Full Zip Jacket**: \$60.00, 3 reviews, color options: brown, green, red, sizes: XS, S, M, L, XL.

A blue **More** button is located below the products, with a handwritten note *Load more products* and an arrow pointing to it.

The footer contains navigation links: About us, Customer Service, Privacy and Cookie Policy, Search Terms, Contact Us, Advanced Search, and Orders and Returns. It also features an email subscription form with a **Subscribe** button and a **"Back to top" button** (a circular icon with an upward arrow), with a handwritten note and arrow pointing to it.
